

Gilbos: testimonial of a satisfied Process2Flow client

Gilbos NV and its subsidiary Gilbos Slovensko have all the technical and logistical know-how to be of full service to manufacturers of machines:

- a very extensive product development department,
- stock removal, sheet metal working, purchasing of components
- product assembly

Peter De Bruyne:

"In order to streamline and secure our structures even more effectively, we were looking for a computerization process which could be tailor-made to fit our needs.

After investigating and evaluating various different options, we decided to go with Vivaldi Software, and more specifically, with the Process2Flow application.

Thus far, Process2Flow has proven to be perfectly suited to be modulated for various different applications within our organization. We also use the software internationally, as our Slovakian colleagues work on the same platform.

A number of our applications: customer complaints, internal audits, engineering changes, supplier complaints and non-conformities.

Gilbos is a huge fan of Vivaldi Software! "
